Proxy/Assistant

Overview

Under the Proxies/Assistants configuration, you can assign one or more users as your assistant. An assistant has the ability to work on tasks or start processes on your behalf. Use caution when making someone your assistant, as they would basically have the same security as your account does.

The assistant/proxy list shows your current assistants. To add a new assistant, click the Add New... button. To remove an assistant, select the assistant in the list box, and then click the Delete button.
